## By the River, by the Water

Rivers define the landscape and the lives of those who live along their banks. They supply water, food and construction materials and make the land fertile. Rivers transport people and goods and are the source of many myths and legends. They are places of recreation and the habitat for countless animal and plant species. All over the world, the quantity and the quality of river water are decisive in determining the quality of life. On our journeys along the rivers of the world, we meet people who live with the water and depend on it for their livelihood and we provide insights into cultures and habitats.

In the subtropical rainforest to the south, the river provides a habitat for China’s last wild elephant population, numerous species of monkey and even the odd tiger.

#### 09 The Yenisei – Russia’s River of Tears

[SD](#)

Ships are only able to sail down the Yenisei to regions north of the Arctic Circle during the short Siberian summer. When the river is icebound, the villages along its banks are practically cut off from the outside world. There are no roads or railway links to this desolate region. Most of the people who live here are descendants of those displaced and banished during the Stalin era. For them, the Yenisei is both a lifeline and a source of great sorrow.
